M14 EXTENDED WIRE EDM MIL STD 1913 OPTICAL MOUNT,
NSN 1005-01-533-8160, P/N 2008

Wire EDM manufacturing process assures extremely long service life.
Extra long for specialized mounting requirements.

SEI Wire EDM extended M14 MIL STD 1913 Scope Mount (Top)
SEI Wire EDM M14 MIL STD 1913 NSN Scope Mount, NSN 5855-01-506-5750 (Bottom)

Recently we were asked to develop a slightly longer version of our famous M14 wire EDM MIL STD 1913 mount (NSN 5855-01-506-5750) for mounting the new generation of European extra large diameter tube scopes. This new mount attaches exactly the same as our standard US Government issue M14 mount now seeing wide-spread combat use; providing a stabile, three point secure base for mounting extra long and large objective scopes. Wire Electro Discharge Machine (EDM) manufacturing yields a product totally devoid of stress, thereby guaranteeing an extremely long service life. Easily clamps to charger guide dovetail and receiver mount lug without modifications. Heavy forward locking screw provides rock solid stability at receiver ring. Picatinny rail provision now provides a sight channel that won't block use of iron sights. Repeatable-zero with this combat-proven design. *NOTE: Due to the very unique requirement served by this device and ongoing military requirements, availability may be very limited.*

SPECS: Wire EDM machined 4140 steel, black Melonite MIL SPEC finish, hardened to RC 60-62. 7.0" Long, 1.875" (4.7cm) High, Weighs .96 lbs.

Part Number	Description
2008	M14 Extended Optical Mount
