M14 TRITIUM CLOSE COMBAT SIGHT, P/N 2019

Genuine Trijicon® tritium vial in Wire EDM front sight.

The SEI M14 Tritium Close Combat Sight (TCCS) is designed specifically as a back up emergency iron sight on MK14-type rifles in low light conditions at relatively close ranges. The TCCS is fitted with the best tritium self-luminous vial available – a genuine Trijicon unit. This sight is not intended for engagements where critical accuracy at extended ranges is required. The M14 TCCS is made by wire Electro Discharge Machining (EDM) 4140 chrome moly steel for exceptionally long service life, unlike competing units that are manufactured from mild cast steel or made from 12L14 screw stock. The dovetail configuration will fit both USGI and aftermarket M14 flash hider bases or either of the SEI Gas Lock Front Sight-Dovetail (GLFS-D) designs.

SPECS: Wire EDM machined 4140 steel, black phosphate finish, tritium vial diameter: 0.0874”.

Part Number	Description
2019	M14 Tritium Close Combat Sight (Dovetail)
